2022 - Annual Report for the St-Isidore Drinking Water System

Dear Mr. Durocher,

Please see attached, the summary report for the St-Isidore Drinking Water System that covers the period from January 1 to December 31, 2022.

This summary report has been completed in accordance with O. Reg. 170/03 Schedule 22 under the Safe Drinking Water Act. The target due date for this report is March 31st, 2023.

This summary report includes the quantities and flow rates of the water supplied by the Township of Alfred-Plantagenet to The Nation Municipality.

This report is also distributed to the Members of the Municipal Council.

Sincerely,

Sebastien Mainville
Water and Wastewater O.I.C.

Doug Renaud, ORO
Director of Water & Wastewater

Nicholas Pigeon, CET
Water and Wastewater Manager

In the preparation of this summary report, we have complied with the following requirements:

- List the requirements of the Act, the regulations, the systems approval, drinking water works permit, municipal drinking water license and any orders applicable to the system that were not met at any time during the period covered by the report;
- For each requirement referred to in clause (a) that was not met, specify the duration of the failure and the measurements that were taken to correct the failure;
- A summary of the quantities and flow rates of the water supplied during the period covered by the report, including monthly average and maximum daily flows;
- A comparison of the summary referred to in paragraph 1 to the rated capacity and flow rates approved in the system approval, drinking water works permit or municipal drinking water license, or if the system is receiving all of its water from another system under an agreement pursuant to subsection 5 (4), to the flow rates specified in the written agreement.

Comparison:

During the period of January 1 to December 31, 2022:

- The maximum daily flow to the St-Isidore distribution system was 626 m³/day. This occurred in June, and it represented 49% of the rated available capacity of 1277 m³/day. The rated capacity is the amount of water that has been agreed upon to be supplied from the Alfred-Plantagenet Township to the Nation Municipality.
- The average daily distribution flow in the St. Isidore Drinking Water System was 208 m³/day.

Describe your Drinking Water System

The St-Isidore drinking water system is supplied with chloraminated water from the Lefavre WTP in Alfred-Plantagenet Township. The water first reaches the Plantagenet booster station which consists of: one 84.4 m3 clearwell ; two high lift pumps each rated at 20 L/sec.; a chemical feed system designed to boost the chloramine level when needed; one flow meter; two Cl2 analyzers (free and total); and one 125 KW standby power generator. The high lift pumps deliver water from the clearwell to the water tower in the village of St-Isidore, from where the water is gravity fed to the community. The water tower is equipped with one flow meter; and two Cl2 analyzer (Free and Total) for ongoing residual monitoring. This operation is fully automated and remotely monitored by the SCADA System. Water Operators perform manual checks, log data, take water samples for water quality monitoring, and perform maintenance of the system. This facility operates under C of A # 7256-6NEMJ7.
